

QGIS Application - Feature request #2338

Cannot create a layer from csv file in projected CS

2010-01-02 11:25 AM - Maxim Dubinin

Status:	Closed	
Priority:	Low	
Assignee:	nobody -	
Category:	Projection Support	
Pull Request or Patch supplied:		Resolution: worksforme
Easy fix?:	No	Copied to github as #: 12398
Description		
<p>Unsure if this is a bug or enhancement.</p> <p>1) Open attached csv file with delimited text plugin;</p> <p>2) Right-click on a layer, save as shapefile</p> <p>3) Choose UTM zone 43N as CS</p> <p>QGIS tries to project already projected layer and complains. IMHO it shouldn't try to project, it should just assign chosen coordinate system.</p>

It also seems to me that there is no way I can save such csv as a shapefile, as choosing WGS84 doesn't help either.

ah, scratch comment #3906, got tangled in projections :)

#4 - 2010-06-11 11:45 PM - Paolo Cavallini

- Resolution set to worksforme

- Status changed from Open to Closed

Have you set the correct CRS for the layer when loaded? Otherwise it will take the default. Please reopen if appropriate
