Description

In the categories section of the new symbology, once you have classified your data there is no way to then add another class without saving the layer, re-classifying, then setting up all the custom symbols / line markers again.

The desired enhancement is similar to that found in the old symbology and the Graduated section of new symbology.

I confirm that this is missing and much needed feature as well as Add class button (also present in old symbology but missing in new).
