

QGIS Application - Bug report #2377

Symbology legend classification items can get out of sync with classification field

2010-01-18 10:13 PM - springmeyer -

Status:	Closed	
Priority:	Low	
Assignee:		
Category:	Symbology	
Affected QGIS version:	master	Regression?: No
Operating System:		Easy fix?: No
Pull Request or Patch supplied:	No	Resolution: wontfix
Crashes QGIS or corrupts data:	No	Copied to github as #: 12437
Description		
<p>Using current symbology (not sym-ng) and a postgis dataset (openstreetmap) it is possible to:</p> <ol style="list-style-type: none">1) choose unique value symbology2) choose a classification field of text and classify features3) then still within the symbology interface change the classification field to a int4 type4) then leave the symbology interface without again hitting 'classify' <p>I know this is a bit of a fringe thing, and I'm not sure out the right solution, but I noticed this because somehow I managed to do this and it breaks QuantumGIS (and I assume other plugins that query the classification field type and value), because QGIS reports int4 (Qvariant.Int) type but returns text-based feature values.</p>		

History

#1 - 2011-12-16 01:57 PM - Giovanni Manghi

- Target version changed from Version 1.7.0 to Version 1.7.4

#2 - 2012-04-16 06:23 AM - Paolo Cavallini

- Target version changed from Version 1.7.4 to Version 1.8.0

- Affected QGIS version set to master

- Crashes QGIS or corrupts data set to No

#3 - 2012-09-04 12:02 PM - Paolo Cavallini

- Target version changed from Version 1.8.0 to Version 2.0.0

#4 - 2014-06-28 07:37 AM - Jürgen Fischer

- Target version changed from Version 2.0.0 to Future Release - Lower Priority

#5 - 2015-11-14 05:04 AM - Giovanni Manghi

- Pull Request or Patch supplied set to No

- Status changed from Open to Closed

- Assignee deleted (nobody -)

- Operating System deleted (All)

- Status info deleted (0)

- Resolution set to wontfix
