QGIS Application - Bug report #2407
Quick search behaviour in attributes tables has changed

2010-02-02 04:01 AM - GuZzO -

Status:	Closed			
Priority:	Low			
Assignee:	nobody -			
Category:	Vectors			
Affected QGIS version:		**Regression?:**	No	
Operating System:	Windows	**Easy fix?:**	No	
Pull Request or Patch supplied:		**Resolution:**	fixed	
Crashes QGIS or corrupts data:		**Copied to github as #:**	12467	

Description

When i start a search within attribute tables with Mimas (1.0.3), searches return results as if it was a SQL request ->   SELECT * FROM table WHERE column like '%word_to_search%'

When i start a search within attribute tables with Enceladus (1.0.4), searches return results as if it was an exact match SQL request -> SELECT * FROM table WHERE column = 'word_to_search'

I don't know if it's referenced as bug but I prefer the previous behaviour. The new one is too rigid...

History

#1 - 2010-02-02 04:09 AM - Giovanni Manghi

Did you tried adding the wildcards?

#2 - 2010-02-02 04:24 AM - GuZzO -

I tried adding % and * before and/or after the word I searched but nothing changes....
I only got results when i search the exact word (including capitals letters)

I use [[PostGIS]] as vectors provider.

Unfortunately "Quick search" is not an "find" anymore. Wildcards are not accepted, unescaped SQL also gives errors.
I.e. try to find "ab'c" ->

    syntax error, unexpected Unknown_CHARACTER, expecting $end

Also it allows to inject SQL. I.e. select all records:

    text' or 1=1 or COLUMN like 'text

Tested on QGIS trunk r12951M with Shapefile (DBF).

#4 - 2010-03-28 03:18 AM - Martin Dobias

- Resolution set to fixed

- Status changed from Open to Closed

Fixed in commit:c39ef3de (SVN r13180) (and escaping quotes in)
