

QGIS Application - Bug report #2512

General plugin failure if "username" in C:/Documents and Settings/username has non-ascii characters

2010-03-07 04:11 AM - alobo -

Status:	Closed		
Priority:	Low		
Assignee:			
Category:	Python plugins		
Affected QGIS version:		Regression?:	No
Operating System:	Windows	Easy fix?:	No
Pull Request or Patch supplied:		Resolution:	fixed
Crashes QGIS or corrupts data:		Copied to github as #:	12572
Description			
<p>The current windows install sets the .qgis/python/plugin directory under C:/Documents and Settings/username</p> <p>which results on general plugin failure in the case "username" has non-ascii characters, i.e.</p> <p>'C:/Documents and Settings/Mauro RodrÃ-guez Rey/.qgis/python'</p> <p>A solution would be to optionally set the .qgis directory to another place.</p> <p>Not sure if this problem would also occur for non-windows installations.</p> <p>Agus</p>

Hi,

to be more specific, for "general failure" it is meant that the python plugins do not install when the windows username includes non-ascii chars.

As far as I know this does not affects installations on linux, but would be better to double check.

#2 - 2010-03-07 08:19 AM - Jürgen Fischer

- *Resolution set to fixed*
- *Status changed from Open to Closed*

fixed in commit:3e339396 (SVN r13014).
