| Easy fix?: | No | |
| Description | | |
| <p>Hi,</p> <p>looks like we have 2 functions which are doing the same job.</p> <p>1. View > Zoom Actual Size</p> <p>and</p> <p>2. Right click on a raster layer name > Zoom to best scale (100%)</p> <p>They both works for rasters only and they zoom to the same scale so i think an unification is needed here.</p> | | |

History

- Resolution set to worksforme
- Status changed from Open to Closed

I don't see your point: I only have zoom to layer (extent) in both menus, and it works for raster and vector alike. Please reopen if I'm wrong
