

QGIS Application - Feature request #2608

Add python plugin paths

2010-03-29 04:36 PM - Chris Crook

Status:	Closed	
Priority:	Low	
Assignee:	Borys Jurgiel	
Category:	Python plugins	
Pull Request or Patch supplied:		Resolution: fixed
Easy fix?:	No	Copied to github as #: 12668
Description		
<p>This proposed patch to qgis.utils modifies the plugin loading to allow users to define additional plugin path locations (for example shared plugin folders). It allows these paths to be defined by a QGIS_PYTHONPATH environment variable, which can hold multiple paths separated by a semicolon. In each path it will look for a plugins folder, and in that each folder containing an <u>init</u>.py* will be treated as a plugin module.</p>

Chris,

may I suggest you to use e.g. QGIS\_PLUGINPATH - that would contain path(s) directly to the directory with plugins. Because QGIS\_PYTHONPATH gives impression that one can override the whole python path and not just path for plugins. So, instead of QGIS\_PYTHONPATH/plugins I suggest QGIS\_PLUGINPATH

Hi Martin

Good idea - I've updated the patch to do this. This does mean that I've changed the findPlugin function - it now looks in the directory it is given, rather than in the plugins subdirectory of that. However as far as I can see it isn't used anywhere else, so I think that this should be Ok.

Chris

#3 - 2010-04-04 03:31 AM - Martin Dobias

- Resolution set to fixed
- Status changed from Open to Closed

Applied in with few modifications
