

QGIS Application - Bug report #2641

Problems with New Labelling plugin

2010-04-09 01:38 AM - mesajs -

Status:	Closed	
Priority:	Low	
Assignee:	nobody -	
Category:		
Affected QGIS version:		Regression?: No
Operating System: Windows		Easy fix?: No
Pull Request or Patch supplied:		Resolution: duplicate
Crashes QGIS or corrupts data:		Copied to github as #: 12701
Description		
<p>New labelling works well on the map canvas, but rendering in print composer is poor:</p> <p>1.Label placement is too low.</p> <p>2.Fonts not properly rendered.</p> <p>Attached examples are snips showing roughly the same section of a map tagged as follows:</p> <p>AROUND - Labels around points, or above line and below line selected for lines</p> <p>OVER - Labels over points, or on lines</p> <p>CANVAS - as appears on the main map canvas</p> <p>COMPOSER - created in map composer with map saved as a PNG image</p> <p>For example, in composer_around.jpg, the label Deer fence (lower left hand corner) is on the line, while labels Fence A and Fence B are well below their lines. Points TI48 and TI61 (to the left of label Upper wetlands) are so far below their associated points that TI48 appears to be associated more closely with point TI61. Label TI61 looks like T61. The equivalent snippet from the main QGIS screen (canvas_around.jpg) shows none of these deficiencies.</p> <p>Using QGIS r13288 under Windows Vista 64.</p> <p>Font is Ms Shell Dlg 2, font size 8. The label engine is set to Show all labels.</p> <p>PS Sample composer_screen_around_jpg shows how the section from composer_around.jpg appears on the screen before saving as a png image. It's virtually unreadable.</p>
