<b>Description</b>		
<p>If you open the properties window of an object (layer, CRS anything) the icons at the right are movable.</p> <p>While it might be a <b>feature</b>, you can place the icons too far right or left, in a place that is not any viewable or clickable thus effectively disabling the sub-feature.</p> <p>Also the icons' coordinates are saved with-in the qgis, and are not resetting if you restart the application</p>
