

QGIS Application - Bug report #2697

error loading dissolve layer?

2010-05-07 11:26 AM - Milena Nowotarska

Status:	Closed	
Priority:	Low	
Assignee:	cfarmer -	
Category:	GUI	
Affected QGIS version:		Regression?: No
Operating System:	Windows	Easy fix?: No
Pull Request or Patch supplied:		Resolution: worksforme
Crashes QGIS or corrupts data:		Copied to github as #: 12757
Description		
<p>fTools. I got an error on loading dissolve layer.</p> <p>The layer was not phisically created in the given path, progress bar did his job, dialog said it was succesfully created but when loading it I got an error.</p> <p>The path was empty - no layer created. Checked different paths for server and local discs, also for diacritics. No success.</p> <p>I use Osgeo4w installation.</p>		

History

#1 - 2010-05-13 01:35 AM - Alexander Bruy

Can't reproduce with commit:c5d6626a (SVN r13469). Can you post sample data?

#2 - 2010-05-16 12:15 PM - cfarmer -

- Resolution set to worksforme

- Status changed from Open to Closed

I'm going to close this as 'worksforme', but please don't hesitate to reopen it if the problem persists. As mentioned above, a sample dataset with steps to reproduce the problem would be helpful if available.
