

QGIS Application - Bug report #2699

editing causes vanishing .tab layers form the map canvas

2010-05-07 01:03 PM - Milena Nowotarska

Status:	Closed	
Priority:	Low	
Assignee:	nobody -	
Category:	Map Canvas	
Affected QGIS version:		Regression?: No
Operating System:	Windows	Easy fix?: No
Pull Request or Patch supplied:		Resolution: invalid
Crashes QGIS or corrupts data:		Copied to github as #: 12759
Description		
Environment: few .tab and .shp line layers; polygon .shp layer in edition		
Behaviour: adding attribute values in the pop-up window after edition causes dissapearing .tab layers from the map canvas. shp layer stays displayed. Only zoom to a layer brings .tab layers back, no other navigation functions do so, nor saving the editing layer.		
Adding attribute values in the Attribute table works ok (may go to other row), unless you want to do something on map canvas - then the layers dissapear from the map canvas.		

History

#1 - 2010-09-19 07:40 AM - Paolo Cavallini

Still true with GIS 1.5? Please somebody confirm.

#2 - 2010-11-13 04:36 PM - Volker Fröhlich

- Resolution set to invalid

- Status changed from Open to Closed

Reporter can't reproduce it.
