

QGIS Application - Feature request #2730
Support PostGIS geography type

2010-05-18 04:33 AM - nick -

Status:	Closed	
Priority:	Low	
Assignee:	Jürgen Fischer	
Category:	Data Provider	
Pull Request or Patch supplied:		Resolution: fixed
Easy fix?:	No	Copied to github as #: 12790
Description		
<p>Tables with geography columns (new in [[PostGIS]] 1.5.x) are not detected when adding new [[PostGIS]] layer. Geographies have been added for working in spherical (lat/lon) coords and respecting IDL and poles.</p> <p>Operators and functions are the same for geometry, albeit restricted for geography being new. And schema definition is easier also with no [[AddGeometryColumn]] magic.</p> <p>Can't use quantum GIS on [[PostGIS]] geography database without this support.</p>		

History

#1 - 2010-05-24 04:06 PM - Mike Taves

A simple workaround is to create views that cast the geography column(s) to geometry. This gets slightly more complicated if you want to have update/delete operations supported, since you need to write the rules for the views. Furthermore, this doesn't solve the IDL/pole geometry issues that geography resolves.
