Affected QGIS version:		**Regression?:**	No
Operating System:	Linux	**Easy fix?:**	No
Pull Request or Patch supplied:		**Resolution:**	invalid
Crashes QGIS or corrupts data:		**Copied to github as #:**	12861

Description

Qgis Trunk (r13619M) crashes when adding .kml files. The kml. was originally created in [[GoogleEarth]] and saved as a .kml file. When I try to add the file QGIS crashes.

History

#1 - 2010-06-12 06:16 AM - Borys Jurgiel

Both files work fine here on ubuntu 9.10 32bit, gdal 1.7.2

#2 - 2010-06-12 07:57 AM - andre mano

- *Resolution set to invalid*
- *Status changed from Open to Closed*

It's a false alarm... It's something with my system. My QGIS just crashes whenever I add a vector Layer (no matter what tipe...).

Anyway, thanks for checking.
