Please paste what files are contained in this directory: /usr/local/share/qgis/python/qgis

When configuring the compilation, have you modified any of the CMake variables?

#2 - 2010-06-22 11:17 PM - PvB -

- Resolution set to invalid

- Status changed from Open to Closed

Hi, just tried to compile again, but now after first having removed QGIS 1.4 completely, including /usr/local/share/qgis/python/qgis. Happily everything seems to work like a charm now. Thanks and sorry for the false alarm
