

QGIS Application - Bug report #2849

Strange behavior after layer editing

2010-06-29 11:43 PM - dr -

Status:	Closed	
Priority:	Low	
Assignee:	nobody -	
Category:	Digitising	
Affected QGIS version:		Regression?: No
Operating System:	All	Easy fix?: No
Pull Request or Patch supplied:		Resolution: fixed
Crashes QGIS or corrupts data:		Copied to github as #: 12909
Description		
<p>1. Open any vector layer;</p> <p>2. Choose Pan Map tool and click right button of mouse in the View area. All works fine - nothing occurs;</p> <p>3. Toggle editing and draw any features. Turn off editing and press 'Discard' in Stop Editing window;</p> <p>4. Choose Pan Map tool and click right button of mouse in the View area. Cursor looks like layer is in editing mode (the first bug), message window about Layer not editable appears. This window contains string: "Cannot edit the vector layer. To make it editable, go to the file item of the layer, right click and check 'Allow Editing'." But I can't find 'Allow Editing' string anywhere, only 'Toggle editing' (the second bug). If click Ok - right menu shows (the third bug).</p> <p>r13845</p>
