QGIS Application - Bug report #2880
makefiles not parallel building proof

2010-07-11 03:08 AM - papillon81 -

Status:	Closed			
Priority:	Low			
Assignee:				
Category:	Build/Install			
Affected QGIS version:		**Regression?:**	No	
Operating System:	All	**Easy fix?:**	No	
Pull Request or Patch supplied:		**Resolution:**		
Crashes QGIS or corrupts data:		**Copied to github as #:**	12940	

Description

In times of multi-core machines it is not too uncommon to compile projects like QGIS with "make -j9" or even higher. This does not work, however, as the compile process bails out. Not a big thing, lowering it to -j6 makes it work, but the error shows a build dependency problem in the makefiles that should be fixed.

Here is a part of the log:

```
make -j9

History

#1 - 2010-10-10 09:52 PM - sharpie -

The 1.5.0 source won't build with anything above -j1 for me. Makes development work a bit tedious as it takes a good 5 minutes to compile or recompile.

#2 - 2011-03-07 09:09 AM - Anne Ghisla

I regularly compile with make -j4 on my dual core, since a long time, both on Debian and Fedora. Does this bug affect Gentoo only?

#3 - 2011-03-07 11:57 AM - Volker Fröhlich

No, not specific to Gentoo. I've seen it happen with -j 16.

#4 - 2011-07-02 03:20 AM - Volker Fröhlich

- Assignee deleted (nobody -)

The problem seems gone with version 1.7. I took multiple runs with up to 30 workers.

Can somebody confirm that?

#5 - 2011-10-16 03:29 PM - Volker Fröhlich

- Pull Request or Patch supplied set to No

- Status changed from Open to Closed

As I mentioned before, I haven't seen that happen for quite some time with a high number of workers. Please re-open if I'm wrong.
