

## QGIS Application - Bug report #2933

### KML export: Field values are shifted into <description> and <name>

2010-08-09 05:13 PM - Volker Fröhlich

<b>Status:</b>	Closed	
<b>Priority:</b>	Low	
<b>Assignee:</b>	nobody -	
<b>Category:</b>	Data Provider	
<b>Affected QGIS version:</b>		<b>Regression?:</b> No
<b>Operating System:</b>	All	<b>Easy fix?:</b> No
<b>Pull Request or Patch supplied:</b>		<b>Resolution:</b> fixed
<b>Crashes QGIS or corrupts data:</b>		<b>Copied to github as #:</b> 12993
<b>Description</b>		
<p>Using QGIS' "Save Vector Layer as" produces undesired results. Whilst the schema definition looks good, the first two columns' content is shoved into &lt;description&gt; and &lt;name&gt;. You also run into data type problems therefore. A random message from a mailing list claimed similar problems and the writer was told, he used the API wrong. Sadly I couldn't figure out, how to use it correctly!</p> <p>I also converted with ogr2ogr and the output looks correct. But neither file shows the correct attributes in QGIS. That might be related.</p> <p>The included shapefile is the source of conversion. ogr.kml and qgis.kml are the conversions.</p> <p>GDAL version is 1.6.8.</p>
