

QGIS Application - Bug report #2978

attribute edit widget 'immutable' acts like 'hidden'

2010-09-02 07:37 AM - cmoe -

Status:	Closed	
Priority:	Low	
Assignee:	nobody -	
Category:	GUI	
Affected QGIS version:		Regression?: No
Operating System:	RedHat	Easy fix?: No
Pull Request or Patch supplied:		Resolution: fixed
Crashes QGIS or corrupts data:		Copied to github as #: 13038
Description		
When setting the edit widget of an column to 'immutable', the column doesn't show up at all in the identify or digitizing form. That's what I expect from the edit widget 'hidden' (and what 'hidden' does). The 'immutable' should still show the value, but perhaps in grey and, of course, not editable.
