Description

My old project file rastar layer is not appering after installing plug ins and updating the program, i can open the same rastar layer in other project and appears well.

Other collegues that are expereinced with QGIS had checked and said they have not seen something like this before.

Please help to solve.

Hello, bug triage...

I can load the project file in QGIS 2.13 with no crash. It seems that there are two layers that use OpenLayers plugin. Perhaps was it a problem with this plugin.

Could we close this bug ?
