

QGIS Application - Bug report #3116

QGis makes X crash and go back to login screen

2010-10-16 02:08 AM - Luca Casagrande

Status:	Closed	
Priority:	Low	
Assignee:	nobody -	
Category:	GUI	
Affected QGIS version:		Regression?: No
Operating System:	Debian	Easy fix?: No
Pull Request or Patch supplied:		Resolution: invalid
Crashes QGIS or corrupts data:		Copied to github as #: 13176
Description Just start QGis and use the zoom tool to draw some rectangle (also with no layers). X crashes and goes back to login screen. Gdb: Loaded : fTools (package: fTools) ICE default IO error handler doing an exit(), pid = 4026, errno = 11 [Thread 0x7ffe6686710 (LWP 4029) exited] Program exited with code 01. (gdb)		

History

This might be due to qt 4.7.

Did you compile it by hand, against the proper qt-dev?

#2 - 2010-10-16 10:33 AM - Luca Casagrande

- The same thing happens using QGis 1.4.0 from official repository with a fresh new install.
- Removing ATI driver seems to fix the issue both with 1.4.0 and with trunk.

#3 - 2010-10-16 10:51 AM - Paolo Cavallini

So I would say the problem it's outside QGIS: does this happen with other Qt apps that use graphical acceleration? If so, the ticket should be addressed to the ATI driver, and closed here. BTW, ATI drivers are often a source of problems for me too.

#4 - 2010-10-18 12:36 AM - Luca Casagrande

- Resolution set to invalid
- Status changed from Open to Closed

Yep, same problem with another QT apps.

Closing this one..
