Category:				
Affected QGIS version:		**Regression?:**	No	
Operating System:	Windows	**Easy fix?:**	No	
Pull Request or Patch supplied:		**Resolution:**	invalid	
Crashes QGIS or corrupts data:		**Copied to github as #:**	13255	

Description

In QGIS 1.5, on Windows Vista operating system, the Openlayers plugin 'Google Satellite' image does not print correctly or save as image, even though it uploads to the active project alright and appears in the print composer correctly. Other shapefiles in the active project print correctly. When saving or printing as a PDF the google satellite image is zoomed out of scale. When exporting as an image the underlying google satellite image does not appear at all, although other active shapefiles do.

- Resolution set to invalid

- Status changed from Open to Closed

This is not a QGIS problem as the OL plugin is not a core one. We will soon have the TRAC for 3rd party plugins. Meanwhile you can contact the author, but I believe that is a know limitation of the plugin.
