Description		
<p>I noticed a bug when selecting multiple layers in a web service:</p> <p>1-open the window for adding a WMS</p> <p>2-connect to a web service</p> <p>3-select multiple services</p> <p>This causes my selection to change for no obvious reason, which, to me, indicates a bug.</p> <p>Windows 7, 32/64 bit</p> <p>QGIS 1.6.0</p>

when you select all layers of a group, the group is selected instead, which translates to the same thing later on - unless it's a named group. If that the problem, it's a duplicate of #3245.
