

QGIS Application - Bug report #3299

Crash loading Mapinfo tab file with non-spatial features

2010-12-06 04:29 PM - Alister Hood

Status:	Closed	
Priority:	Low	
Assignee:	nobody -	
Category:	Data Provider	
Affected QGIS version:		Regression?: No
Operating System:	Windows	Easy fix?: No
Pull Request or Patch supplied:		Resolution: worksforme
Crashes QGIS or corrupts data:		Copied to github as #: 13359
Description		
<p>QGIS often crashes when loading .tab files.</p> <p>The offending files are added to the layer control, but without a symbology row. If I click to turn the layer on, it crashes. I'll attach the error messages output by Debugview.</p> <p>I think the problem is when a tab file contains features without any geometry, even if there are other features in the file that do have a geometry.</p> <p>I'll attach an example .tab file that causes the crash</p>		

History

#1 - 2011-03-05 03:38 AM - Paolo Cavallini

- Resolution set to worksforme
- Status changed from Open to Closed

Please check again with a fresh install and reopen in necessary. It works for me.

#2 - 2011-03-06 02:35 PM - Alister Hood

Yes, it seems to work now :)
