Description

Hi,

when I want to query information from several overlapping raster maps with the identify tool. In the information display the top grid map (object 0) values is shown expanded, but the lower layers not. So I have to expand for each underlying grid layer 2 times to get the value of the clicked coordinates.

It would be nice to have an option that shows all layers with expanded information. Maybe it would also be nice to add some configuration options, what information to show.

thanks, Otto
