

QGIS Application - Bug report #3314

Node tool does not allow multiple-selection when geometry is invalid

2010-12-09 01:51 PM - Alister Hood

Status:	Closed	
Priority:	Low	
Assignee:		
Category:	Digitising	
Affected QGIS version:	master	Regression?: No
Operating System:	Windows	Easy fix?: No
Pull Request or Patch supplied:	No	Resolution: fixed
Crashes QGIS or corrupts data:	No	Copied to github as #: 13374
Description		
<p>To reproduce:</p> <ul style="list-style-type: none">- Select a polygon layer and click the edit button- Try to select multiple nodes using Ctrl-click. It should work.- Using the node tool, move some nodes so that the polygon border crosses itself. A green x should be displayed at the intersection.- Try to select multiple nodes using Ctrl-click. It won't work. <p>I can't see any reason why it is desirable for multiple-selection to be disabled when the geometry is invalid. The user may want to fix it by selecting multiple-nodes and deleting (or moving) them.</p>

| The user may want to fix it

I mean fix the invalid geometry of course, not fix the bug ;)

#2 - 2011-12-16 01:49 PM - Giovanni Manghi

- Target version changed from Version 1.7.0 to Version 1.7.4

#3 - 2012-04-16 06:24 AM - Paolo Cavallini

- Crashes QGIS or corrupts data set to No
- Affected QGIS version set to master
- Target version changed from Version 1.7.4 to Version 1.8.0

#4 - 2012-09-04 12:02 PM - Paolo Cavallini

- Target version changed from Version 1.8.0 to Version 2.0.0

#5 - 2012-12-30 08:41 AM - Giovanni Manghi

- Pull Request or Patch supplied set to No
- Assignee deleted (nobody -)
- Resolution set to fixed
- Status changed from Open to Closed

it seems to work as expected on qgis master, please reopen if necessary.
