

QGIS Application - Bug report #3343

segfault loading more wms layers into a raster layer

2010-12-16 05:49 AM - Giuseppe Sucameli

Status:	Closed	
Priority:	Low	
Assignee:	nobody -	
Category:	Rasters	
Affected QGIS version:		Regression?: No
Operating System:	Linux	Easy fix?: No
Pull Request or Patch supplied:		Resolution: fixed
Crashes QGIS or corrupts data:		Copied to github as #: 13403
Description		
A segfault occurs using python to load more than one wms layers into one raster layer. Instead, all works fine using the "Add WMS layer" GUI to do the same, so I don't know if it's a python binding issue. The following code snippet is the same code present in the [[PyQGIS]] doc, except that it tries to load more wms layers. <pre>url = 'http://wms.jpl.nasa.gov/wms.cgi' layers = ['global_mosaic', 'global_mosaic_base'] styles = ['pseudo'] format = 'image/jpeg' crs = 'EPSG:4326' rlayer = [[QgsRasterLayer]](0, url, 'some layer name', 'wms', layers, styles, format, crs) if not rlayer.isValid(): print "Layer failed to load!" [[QgsMapLayerRegistry]].instance().addMapLayer(rlayer)</pre> Running the last row to add the layer to the canvas I get segfault. I'm sure the error occurs when the rendering starts. Indeed disabling the renderFlag no segfaults occur until I re-enable it. Sometimes I get a core-dumped. See the attachments.

Replying to [comment:1 jef]:

Could you try with a different server WMS? I've just recompiled QGis and it still crashes.

#3 - 2010-12-16 08:51 AM - Jürgen Fischer

- Resolution set to fixed
- Status changed from Open to Closed

fixed in commit:542f1ecb (SVN r14930). You need to specify a style for each layer.
