This is probably from an old version of a plugin. You need to disable plugins and reinstall them:

Open your home folder, then open .qgis (Finder->Go->Go to Folder: .qgis). Drag all the plugins (python/plugins) to your desktop and run Qgis to make sure it runs. Then drag them back one-by-one and run QGIS each time. Trash any that crash QGIS and then you can reinstall newer versions with the plugin

installer in Qgis. (Or you could just trash them all and reinstall all of them just to make sure they are all up to date.)

#2 - 2010-12-23 08:35 AM - flueraru -

- Resolution set to fixed
- Status changed from Open to Closed

It worked. Thanks a lot.
