Description

With a vector layer in WGS84 (mifmid or shape)cannot "move" it to Lambert4carto so all my projects do not work no more. It stays at the same place.

I can't even "save as" shape (or mifmid)from wgs84 to lambert 4 carto. Got this msg:

Export to vector file failed.

Error: Failed to transform a point while drawing a feature of type 'ifnGuagno'. Writing stopped. (Exception: forward transform of (0.154603, 0.7364)

failed with error: failed to load datum shift file

)

Even with a project that was working with 1.5 and all previous versions since 0.7.4

In fact OTF only support EPSG projections not IGNF.

"Save as" works only if you don't change the CRS

+1 It occurs even with an updated IGNF register (#3394)
