QGIS Application - Bug report #3509
Changing symbol name causes QGIS crash

2011-02-20 12:26 AM - dr -

Status:	Closed			
Priority:	Low			
Assignee:	Martin Dobias			
Category:	Symbology			
Affected QGIS version:			**Regression?:**	No
Operating System:	All		**Easy fix?:**	No
Pull Request or Patch supplied:			**Resolution:**	fixed
Crashes QGIS or corrupts data:			**Copied to github as #:**	13569

Description

Add any vector layer. Open style manager. Click on symbol name field- name becomes editable. Rename symbol and click on it twice - QGIS crashes.

History

#1 - 2011-02-20 03:36 AM - Giovanni Manghi

do you mean the name of the "symbol layers"?

If yes I'm noticing another thing (on both linux and windows): no crashes, but clicking twice on the symbol layer name makes it editable, but then the name doesn't stick. If you duoble click it again the editable name is the one you choose previously and that didn't stick.

#2 - 2011-02-20 04:48 AM - Maxim Dubinin

confirmed under Win7

http://screencast.com/t/868mUzXw

#3 - 2011-02-20 05:38 AM - Alexander Bruy

This can be reproduced with names of the "symbol layers" and with names of the "symbols" itself.

Doubleclick on name makes it editable, but changes are not saved. Doubleclick after editing on the same symbol/symbol layer causes QGIS to crash.

#4 - 2011-02-20 09:05 AM - Martin Dobias

- Resolution set to fixed

- Status changed from Open to Closed

fixed in commit:4f82c342 (SVN r15223)

#4 - 2011-02-20 09:05 AM - Martin Dobias

- Resolution set to fixed
