

QGIS Application - Bug report #3559

Table Manager, "Failed to backup..."

2011-03-06 02:06 PM - andskog -

Status:	Closed	
Priority:	Low	
Assignee:	Borys Jurgiel	
Category:	Python plugins	
Affected QGIS version:		Regression?: No
Operating System:	All	Easy fix?: No
Pull Request or Patch supplied:		Resolution: invalid
Crashes QGIS or corrupts data:		Copied to github as #: 13619
Description		
<p>When deleting a shapefile. dbf field in Table Manager (v0.2.3), and pressing Save, I get the message "Failed backuping the old table to nnn.dbf~". Happening at every attempt in both W7 and XP.</p>		

History

#1 - 2011-03-06 04:23 PM - Borys Jurgiel

- Resolution set to invalid
- Status changed from Open to Closed

Seems it's a problem with access to nnn.dbf file, while it's already open by Qgis. As Qgis can't delete fields by the OGR Driver, Tablemanager has to modify it on his own.

Unfortunately I have no idea how to do it easily in operating systems not supporting multiple access to file (and I have no plans to invest more time into this plugin, as it's been designed as a temporary solution). I disabled this button on windows. I know it's not a real solution, so any help is wellcome.

I'm closing this ticket as invalid, as this trac is suitable for core plugins only. A trac for external plugins is temporarily hosted by Faunalia:

https://trac.faunalia.it/qgis_plugins/

and hopefully after April's hackfe...eting will be settled here: <https://issues.qgis.org>
