

QGIS Application - Feature request #364

'better' SQL to return results faster from the sample button in the query builder

2006-10-29 09:27 AM - rhys-stewart-gmail-com -

Status:	Closed	
Priority:	Low	
Assignee:	Gary Sherman	
Category:	Data Provider	
Pull Request or Patch supplied:		Resolution: fixed
Easy fix?:	No	Copied to github as #: 10423
Description		
<p>Currently the sql that is used to return a subset of the values of a given column is:</p> <pre>SELECT DISTINCT mycolumn FROM mytable ORDER BY mycolumn LIMIT 25</pre> <p>this will be very slow on very large tables. On a table with ~670000 records this took about 15 seconds execute. A faster method would be a subselect as follows:</p> <pre>SELECT DISTINCT mycol from (SELECT mycol FROM mytable LIMIT 5000) as myfoo</pre> <p>This query took much less than a second to execute on the same table.</p> <p>[[QgsPgQueryBuilder]]::on_btnSampleValues_clicked()</p>
