Easy fix?:	No	**Copied to github as #:**	13750

Description

It would be nice to use drag&drop Layers between different instances of qgis. When I have a layer with a style in some old project and I would like to use the same layer in another project, i need to do the following.

In the old project: look up the source, save the style

In the new (existing) project: open the source, load the style

It would be cool to have this via drag and drop.

History

- Target version changed from Version 2.0.0 to Future Release - Nice to have

#2 - 2015-11-14 07:14 AM - Médéric RIBREUX

- Operating System deleted (Windows)

- Pull Request or Patch supplied set to No

- Assignee deleted (nobody -)

- Status changed from Open to Feedback

Hello, bug triage...

whenever I try this, I can drag'n drop the layer from one qgis instance to another. But as soon as I try to show the layer, QGIS segfaults on QGIS 2.13 master !

- Description updated

For the record, CopyLayersAndGroupsToClipboard plugin offers that now. See [[http://plugins.qgis.org/plugins/CopyLayersAndGroupsToClipboard/]]
