

QGIS Application - Bug report #3695

Layers not shown correctly in layout

2011-03-31 06:07 AM - carlob -

Status:	Closed	
Priority:	Low	
Assignee:	nobody -	
Category:	Projection Support	
Affected QGIS version:		Regression?: No
Operating System:	Windows	Easy fix?: No
Pull Request or Patch supplied:		Resolution: invalid
Crashes QGIS or corrupts data:		Copied to github as #: 13754
Description		
I added two layers in Qgis (Project CRS Google Mercator):		
1. Google Physical		
2. Shapefile with polygon (CRS: Amersfoort / RD New)		
Both are shown correctly in the main view but in a layout the polygon is too large (blown up by ~50%).		
Looks like a layout can't handle two different CRS's?		

History

#1 - 2011-03-31 06:17 AM - Giovanni Manghi

- Resolution set to invalid
- Status changed from Open to Closed

Google layers come at fixed scale levels. The print composer can't handle (for now) correctly those levels, so you have to try manually and choose the right scale. I don't know if it is a limitation of the plugin or of the composer, is not a bug to me either.
