

QGIS Application - Feature request #3752

Clicking inside the polygon with the Node tool

2011-04-17 11:38 AM - Maxim Dubinin

Status:	Open	Resolution: Copied to github as #: 13811
Priority:	Low	
Assignee:		
Category:	Digitising	
Pull Request or Patch supplied:	No	
Easy fix?:	No	
Description		
<p>Right now, one needs to click on the edge of the polygon. This is rather inconvenient, because a) you have to aim hard and b) if you don't see the whole polygon and you click on the adjacent boundary between two you don't really know which ones nodes you've just activated.</p> <p>Example (guess which polygon's nodes are activated): http://gis-lab.info/images/screenshots/20110417-87o-14kb.jpg</p> <p>One should be able to click inside the polygon and have nodes selected.</p>

Same issue when you want to delete a part of a multipart polygon, see my comment on #3770:

To delete a part of a multipolygon, you have to click on one of its vertices, which **might** be a problem if you have a set of contiguous (parts of) polygons).

#2 - 2011-12-16 12:45 PM - Giovanni Manghi

- Target version changed from Version 1.7.0 to Version 1.7.4

#3 - 2012-04-15 10:11 AM - Giovanni Manghi

- Target version changed from Version 1.7.4 to Version 2.0.0

#4 - 2012-10-06 02:35 AM - Pirmin Kalberer

- Target version changed from Version 2.0.0 to Future Release - Nice to have

#5 - 2015-10-22 12:23 AM - Arnaud Morvan

Pull request proposed: <https://github.com/qgis/QGIS/pull/2388>

The user can select the feature to edit by clicking inside the polygon.
