Category:	GUI	
Pull Request or Patch supplied:		Resolution: fixed
Easy fix?:	No	Copied to github as #: 13921
Description		
<p>After some extensive use of bookmarks to explore scattered areas on a map I found some problems with the Bookmarks tool as well as some missing functionality that is very useful to have. I am offering a patch to fix and improve Bookmarks.</p> <p>Here are the issues:</p> <ol style="list-style-type: none">1. a bookmark fails (silently) to store if it has a single-quote in the name (or project name). The quote mark is now escaped before inserting the text in the database.2. double-click on a bookmark item did not work (help says you can) due to an incorrect slot name. The automatic signal/slot binding didn't work because of this. This fixes #27743. the stored precision of the extent was limited to 6 digits. I believe that full floating point precision (17 digits) should be preserved, so the number output precision is set to 17.4. have to delete a bookmark, then create a new one in order to update the extent. I have provided an Update button to do this as well as help text on its use. <p>In the process of working out the coding for the fixes and improvements, I have:</p> <ul style="list-style-type: none">+ reworked some of the Sqlite calls to simplify them as I found them complicated to understand+ put the call to restorePosition in [[QgsBookmarks]] constructor instead of [[QgisApp]]. It makes little sense to have the main program call restore if the saving was done in the destructor.		

History

#1 - 2011-06-02 08:24 AM - Jürgen Fischer

- Resolution set to fixed
- Status changed from Open to Closed

applied in commit:9ae32d32b2cbc82eee29e550f6b2a2b33d3043e4.
