Description

New Feature: show Raster Band number on Layer Panel entries.

In QGIS 1.7 it is very hard to figure out the Raster data one is working on, specially if the project contains many Raster Bands and/or layers or is shared with someone else.

IMHO, it should simply be tagged along the existing "Display classification attribute names in legend", ie, if layer is Raster, show "Band 3" or so accordingly.

It should also be on the "Metadata" tab of "Layer Properties" and other places too.

- Category set to Rasters

#3 - 2011-10-06 08:58 AM - Thaddeus -

Well, I'm just saying that having the information on more than one place is a good thing: being able to copy that (as in copy and paste operation) is even better.
