

QGIS Application - Bug report #4285

on-line labeling doesn't work anymore

2011-09-15 02:09 AM - Sandro Santilli

Status:	Closed	
Priority:	Normal	
Assignee:		
Category:	Symbology	
Affected QGIS version:		Regression?: No
Operating System:	GNU/Linux	Easy fix?: No
Pull Request or Patch applied:		Resolution: invalid
Crashes QGIS or corrupts data:		Copied to github as #: 14224
Description		
<p>I used to be able to specify Above/Below for putting labels <i>before</i> and <i>after</i> the centroid on lines. As in the following example:</p> <p>--- L1 --- L2 --- L3 ----></p> <p>L1 was placed "above", L3 was placed "below" and L2 was "on" the line. I think this happened when orientation was "line" vs. "map" or vice-versa. Not really sure how it happened but did work.</p> <p>Either it was a bug before, or it is a bug now. Now is c42f1ea, before I'm not sure what it was, it's probably written in a bug about label orientation and/or line decoration orientation as it worked at that time.</p> <p>The style I used is here: https://github.com/strk/qgis_pgis_topoview/blob/master/topoview_tpl.qgs in the labels for 'next_right_face' and 'next_left_face' layers.</p>		

History

#1 - 2011-09-21 12:05 AM - Sandro Santilli

- Resolution set to invalid

I believe my memory was at fault... it never worked like that

#2 - 2011-09-21 12:34 AM - Giovanni Manghi

- Status changed from Open to Closed
