

QGIS Application - Bug report #436

QGIS should not use SRS not supported by WMS server

2006-12-07 10:03 AM - maris-kde-gmail-com -

Status: Closed	
Priority: Low	
Assignee: Brendan Morley -	
Category: Web Services clients/WMS	
Affected QGIS version:	Regression?: No
Operating System: Gentoo	Easy fix?: No
Pull Request or Patch supplied:	Resolution: fixed
Crashes QGIS or corrupts data:	Copied to github as #: 10495

Description

Pre-1.3 WMS servers may not have defined EPSG:4326 as supported SRS. Requesting not announced SRS will result in failure. [[br]] QGIS should request data using one of server's announced SRS and not to try EPSG:4326 by default.

Request contains a SRS not offered by the server for one or more of the Layers in the request.

The WMS vendor also reported:

msWMSLoadGetMapParams(): WMS server error. Invalid SRS given : SRS must be valid for all requested layers.

This is probably due to a bug in the QGIS program. Please report this error.

History

#1 - 2006-12-08 04:54 AM - Martin Dobias

- *Resolution set to fixed*
- *Status changed from Open to Closed*

Fixed in commit:8b77487c (SVN r6210). When default SRS is not supported, one of available reference systems will be chosen.

#2 - 2009-08-22 12:46 AM - Anonymous

Milestone Version 0.8 deleted
