

QGIS Application - Bug report #4371

Identify tool does not work with reprojected WMS layers

2011-10-11 03:11 PM - Giovanni Manghi

Status: Closed	
Priority: High	
Assignee:	
Category: Web Services clients/WMS	
Affected QGIS version: master	Regression?: No
Operating System:	Easy fix?: No
Pull Request or Patch supplied: No	Resolution:
Crashes QGIS or corrupts data: No	Copied to github as #: 14303
Description	
<p>I just noticed the following with qgis-trunk under both Linux and Windows:</p> <p>The identify tool does return always</p> <p><i>GetFeatureInfo results: Search returned no results.</i></p> <p>if the WMS is reprojected on the fly (if not reprojected the tool returns the expected values).</p> <p>Moreover, if in the TOC is present a layer from the "openlayers plugin" plugin (active or not), the identify tools does not work at all.</p> <p>Cheers</p>

- Subject changed from identify tool issues with WMS layers to Identify tool issues with reprojected WMS layers and "Openlayers" layers

#2 - 2011-12-16 02:10 PM - Giovanni Manghi

- Target version set to Version 1.7.4

#3 - 2011-12-24 05:02 AM - Giovanni Manghi

- Subject changed from Identify tool issues with reprojected WMS layers and "Openlayers" layers to Identify tool does not work with reprojected WMS layers

- Affected QGIS version set to master

- Crashes QGIS or corrupts data set to No

It has nothing to do with the Openlayers plugin (this is a separate issue). With reprojected WMS layers the identify tool does not work (does not return

anything)

GetFeatureInfo results:Search returned no results.
