History

#1 - 2011-10-28 06:13 AM - Giovanni Manghi

I am running QGIS-master on Ubuntu 11.10 (on different machines) and I don't see this problem. Clean install? from the nightly build repo? self compiled?
it happens with any kind of datasets?

#2 - 2011-10-28 06:35 AM - Matteo Fortini

It started today, and it doesn't go away. My ubuntu is 11.10 amd64 and I installed qgis both from the ubuntugis ppa (1.7.1) and the qgis nightly build repo (1.8 trunk).

The dataset is on a postgis db (8.4), but I can make it crash also loading geotiffs.

I'm on the point of reinstalling everything from scratch, even if it would be a looong day.

#3 - 2011-10-28 07:53 AM - Giovanni Manghi

you may want to try a Virtual Machine first ;) there are plenty already available made with different Linux distributions...

- Status changed from Open to Feedback

#5 - 2011-12-09 08:41 AM - Paolo Cavallini

- Resolution set to worksforme

- Status changed from Feedback to Closed

Not confirmed here. Seems a local problem. Please reopen if appropriate.
