

QGIS Application - Bug report #4485

Item scale jumps randomly when panning around the map content on the composer.

2011-11-02 09:17 AM - Thaddeus -

Status:	Closed	
Priority:	Normal	
Assignee:		
Category:	GUI	
Affected QGIS version:	master	Regression?: No
Operating System:		Easy fix?: No
Pull Request or Patch supplied:	No	Resolution: invalid
Crashes QGIS or corrupts data:	No	Copied to github as #: 14411
Description		
<p>I've come across this a few times and it disappears by itself after using the QGS file for a while: I think this time I captured this strange nuisance.</p> <p>On the attached QGS file, I can consistently see this happening when opening on 1.7 and 1.7.1.</p> <p>1) Composer window is visible. 2) Select Item tag. 3) Select "Move item content" tool. 4) pan around and watch Scale entry.</p>		

History

#1 - 2011-12-16 02:10 PM - Giovanni Manghi

- Target version set to Version 1.7.4

#2 - 2012-04-16 06:31 AM - Paolo Cavallini

- Crashes QGIS or corrupts data set to No
- Affected QGIS version set to master
- Target version changed from Version 1.7.4 to Version 1.8.0

#3 - 2012-09-04 11:56 AM - Paolo Cavallini

- Target version changed from Version 1.8.0 to Version 2.0.0

#4 - 2014-06-01 03:21 AM - Nyall Dawson

- Status changed from Open to Closed
- Resolution set to invalid

This is correct behaviour - the map is using the WGS84 coordinate system, so the scale depends on the latitude. Moving the map content will correctly result in the scale changing.
