

QGIS Application - Bug report #451

variables of translation of world files aren't bigger enough for lambert II extend

2006-12-13 07:20 AM - pascal-ferrand-tiscali-fr -

Status:	Closed	
Priority:	Low	
Assignee:	Tim Sutton	
Category:	C++ Plugins	
Affected QGIS version:		Regression?: No
Operating System:	Windows	Easy fix?: No
Pull Request or Patch supplied:		Resolution: worksforme
Crashes QGIS or corrupts data:		Copied to github as #: 10510
Description		
<p>I must modify manually the world files to translate little map like house plan with precision because the two last variables of a world file create by qgis are't bigger enough to stock translations x or y like 2053000.22 or 754870.12 that are used in lambert II extend. I think two decimals are required to well georeferencer little detailed map.</p>		

History

#1 - 2007-01-01 01:48 PM - Magnus Homann

- Resolution set to worksforme
- Status changed from Open to Closed

If I understand correctly, this is the same error as reported in #478 / #479.

In that case it should be fixed now. If you are not satisfied with the solution, re-open it.
