Description

it's my first bug report so if I've not done it in the right way please tell me. Thanks.

opening QGIS from a terminal:

Warning: loading of qgis translation failed [/usr/share/qgis/i18n//qgis_en_US]

Warning: loading of qt translation failed [/usr/share/qt4/translations/qt_en_US]

On a new empy project: new print composer-> add image-> item --> selection of an svg -> qgis crash

Warning: QLayout: Attempting to add QLayout "" to QgsBrowserDockWidget "", which already has a layout

Confirmed here, same OS and QGIS version.

Seems that manually adding in settings->options->rendering->svg paths /usr/share/qgis/svg/ resolve the problem

Selecting a SVG image that is not part of the QGIS library (so no manual path added) using the "load" options, is not causing any crash on qgis-master on Ubuntu 11.10. Please try update, test again and report back, eventually adding the offending svg symbol and then report back.

Tested also with qgis-master under windows/osgeo4w.

No more problems with updated master. Thanks.
