

QGIS Application - Bug report #473
crash when opening a project

2006-12-19 06:21 AM - Redmine Admin

Status:	Closed	
Priority:	Low	
Assignee:	nobody -	
Category:	Project Loading/Saving	
Affected QGIS version:		Regression?: No
Operating System:	Debian	Easy fix?: No
Pull Request or Patch supplied:		Resolution: worksforme
Crashes QGIS or corrupts data:		Copied to github as #: 10532
Description		
While loading a project, the latest qgis crashes:		
Debug: qgsproject.cpp:1065 5 properties read

History

#1 - 2006-12-19 11:58 AM - Gavin Macaulay -

Can you add a backtrace too please?

#2 - 2006-12-19 11:10 PM - Redmine Admin

sorry I do not have a debuggin version at hand. Anyway, can you test the attached qgs file and see if it crashes for you?

#3 - 2006-12-19 11:19 PM - Gavin Macaulay -

The problem is likely to be with one of the files that you are loading rather than the .qgs file itself, so a .qgs file doesn't help much. Perhaps you can try loading/saving individual layers to determine while layer is causing the problem, and then posting that layer file and the .qgs file here.

#4 - 2006-12-21 03:54 AM - Redmine Admin

I think this is related to the custom projection we are using. We're further investigating on this.

#5 - 2006-12-21 08:16 AM - Redmine Admin

- Status changed from Open to Closed
- Resolution set to worksforme

Further testing did not show a consistent pattern. Rebuilding the project from scratch solved the problem. Still unsure, but better closing it, at least for now.

Milestone Version 0.8 deleted
