QGIS Application - Bug report #4752
Crash when zooming

2012-01-06 01:55 AM - MRick -

Status:	Closed			
Priority:	High			
Assignee:				
Category:	Labelling			
Affected QGIS version:	master	**Regression?:**	No	
Operating System:	Mac OS X 10.6.8	**Easy fix?:**	No	
Pull Request or Patch supplied:		**Resolution:**	invalid	
Crashes QGIS or corrupts data:	Yes	**Copied to github as #:**	14621	

Description

Hi

I have a file in which i rendered bus lines. I set the 'ref' field as a text layer.

When I zoom, QGIS will crash whatever the version is.

It will not crash if I change the text layer value from 'ref' to 'name' or any other field when i am zooming.

Strange, do you mind what could happen?

It is strange, why for a value, not another?

The lines are rendered as rules set as follow:

((line = 'bus') AND (ref = '16'))

I give you the file, but I doubt it will be useful without the right database, but I join you the data set.

The crash log suggest that the error happens in the labeling code.

Could you please try to save your layer to a common format (e.g. shapefile) and prepare a project that triggers the crash? I don't know how to easily load the data you have provided.

- *File Archive.zip added*

Hi this is the crashing test base in shape files.

#3 - 2012-01-19 02:42 AM - Giovanni Manghi

- *Crashes QGIS or corrupts data changed from No to Yes*

- *Priority changed from Normal to High*

#4 - 2012-01-31 05:02 AM - Martin Dobias

- *Category changed from Browser to Labelling*

I am unable to reproduce (linux, master branch) with the attached data. Anyone else does?

#5 - 2012-01-31 06:55 AM - Giovanni Manghi

- Status changed from Open to Feedback

#6 - 2012-02-15 03:37 AM - Giovanni Manghi

- Resolution set to invalid

- Status changed from Feedback to Closed

Closing for lack of feedback. Please reopen if necessary, attaching a project with the layers, symbology and labelling options to trigger the problem. Try also removing any 3rd party plugin if something changes.
