QGIS Application - Feature request #4919

Document that -to be visible in QGIS browser- Sqlite DBs must have the .sqlite extension

Easy fix?:	No	**Copied to github as #:**	14725

Description

Subject says it all.

This is necessary because SQlite DBs do not have usually any extension or so have other extensions like .db

The format specifications do not say anything about the extension, so we can assume that .sqlite extension used by the spatialite format is the "good" one for qgis.

sort of - it actually added .db to sqlite extensions for OGR - so no documentation needed.
