

QGIS Application - Bug report #4958

SL provider crs() method returns nearly always a custom CRS

2012-02-07 03:25 AM - Giuseppe Sucameli

Status:	Closed	
Priority:	Normal

Affected QGIS version:	master	Regression?: No
Operating System:		Easy fix?: No
Pull Request or Patch supplied:	No	Resolution:
Crashes QGIS or corrupts data:	No	Copied to github as #: 14753
Description The SL provider uses proj4string from internal spatial_ref_sys table instead of srid to create a crs. Since QGIS crs-db contains modified CRSs (proj4 strings have a +towgs84 param) most of the SL layers has a custom CRS so when executing layer.crs().postgisSrid() returns 0 instead of the correct CRS.
