Description

Hi all,

I'm working with a tilecache server, and I use QGIS to load some layers from it in WMS.

In QGIS status bar I have always "0 cache hits", also when I opened a view for which QGIS has just generated the cache files (I view them in QGIS cache folder).

Is it only a "label" problem or QGIS not load the available cache files?

I have made my test with QGIS 1.7.4 for Windows and Tilecache 2.11.

Thank you,

Andrea
