<b>Category:</b>	DB Manager	
<b>Pull Request or Patch supplied:</b>		<b>Resolution:</b> invalid
<b>Easy fix?:</b>	No	<b>Copied to github as #:</b> 14873
<b>Description</b> <p>This ticket should be the replacement of #2001 and are notes to be considered when the remaining Postgis Manager features will be ported into DB Manager.</p> <p>*) In a postgis layer if I add/edit a column with the "postgis manager", the attribute table is not immediately updated. This doesn't happens if the column is added trough "Properties -&gt; Attributes".</p> <p>*) If I delete a postgis column with the "postgis manager" and the I open the attributes table, the column is still there filled with "NULL" values. If I reload the layer the column is gone. Does not happen if the operation is done trough the qgis vector properties.</p> <p>*) When adding/editing a column I get always an error if I try to define the length of the field. It seems that doesn't happens just with the "char" data type.</p> <p>*) When creating a new column, the "can be null" checkbox is selected by default, nevertheless I suggest that with datatypes that "cannot be null" to make the checkbox not active to avoid people uncheck it.</p> <p>*) When creating a new column make the selection of datatype consistent with the ones available when adding a new column in the qgis vector properties (actually they list/nomenclature of datatypes is different)</p> <p>*) When adding/editing a new column of a type that is text, then if selecting the "default value" option there is a bug. The query misses the " ' " around the string and so the operation fails. Example</p> <pre>ALTER TABLE "public".distritos ADD teste varchar NULL DEFAULT puppa</pre> <p>but is should be</p> <pre>ALTER TABLE "public".distritos ADD teste varchar NULL DEFAULT 'puppa'</pre>
