

## QGIS Application - Bug report #5133

### Error in high resolution exports with transparent rasters

2012-03-07 09:35 AM - Alexis Viaud

<b>Status:</b>	Closed	
<b>Priority:</b>	High	
<b>Assignee:</b>	Marco Hugentobler	
<b>Category:</b>		
<b>Affected QGIS version:</b>	master	<b>Regression?:</b> No
<b>Operating System:</b>	Unix and Win 32	<b>Easy fix?:</b> No
<b>Pull Request or Patch supplied:</b>	No	<b>Resolution:</b>
<b>Crashes QGIS or corrupts data:</b>	No	<b>Copied to github as #:</b> 14891
<b>Description</b>		
<p>When exporting a high resolution map from composer (e.g. A4/300dpi), where a raster layer has transparency, causes errors in the resulting export (both in raster and pdf exports). Using 1.6 on Windows XP 32bit and 1.7.1 on Ubuntu v10.10.</p>

This is because the raster parts are drawn with a small overlap. There was a good technical for this in versions <= 1.6. Now there is work underway to remove the overlaps (raster\_resampler branch), it looks like it will go into version 1.9

Thx.

But this line of pixel don't appears at the place where there is 2 differents slabs on the raster. It's at the same place everytime on the picture exported but don't link to those rasters. It appears generally at the center of the picture.

Ok, I see. Do you have the chance to try with a newer version (1.7.4 or current master)?

##### #5 - 2012-03-14 07:12 AM - Alexis Viaud

No because ECW raster don't work with both Win and Linux version up to 1.7.1!

My solution for the moment : I export pictures less 250 dpi resolution... But It's a problem if I absolutly need high resolution.

Thx

Up!

The new LTS version is the 1.7.4. Tested on ubuntu 10.10 pc64 it work. No line of pixels anymore, but still between two raster parts.

Problem solved !

Thx

I haven't test on win XP with v1.7.4. I prefer you wait (as soon as possible).

Thx
